

Certified Ethical Hacker (CEH) v13 Exam This is one of the most prestigious exams in the field of cybersecurity, organized by EC-Council. The exam tests your skills in Ethical Hacking, from attack techniques to defenses across platforms such as networks, the cloud, containers, and many other security areas.

With the release of the new CEH v13 version, the exam has been updated with more content on advanced technologies such as AI security, Cloud security, API security, and Quantum computing, requiring candidates to have extensive knowledge and practical skills in modern security scenarios.

What is the structure and content of the CEH v13 exam?

The CEH v13 exam consists of 150 multiple-choice questions to be completed in 4 hours, covering a wide range of security and ethical hacking topics. The exam includes questions from theory to practice, testing the ability to analyze, evaluate, and apply attack and defense techniques.

The main topics in the CEH v13 exam:

- Footprinting and Reconnaissance (12%).
- Scanning Networks (9%).
- Enumeration (9%).
- Vulnerability Analysis (12%).
- System Hacking (10%).
- Malware Threats (10%).
- Sniffing (9%).
- Social Engineering (8%).
- Denial-of-Service (DoS) (10%).
- Session Hijacking (8%).
- Evading IDS, Firewalls, and Honeypots (10%).
- Hacking Web Servers, Web Applications và API Security (12%).
- Cloud, IoT, and Quantum Computing (8%).

The exam not only tests theoretical knowledge but also requires candidates to demonstrate practical skills on cloud systems, APIs, containers, and system security through real-world exercises.

Effective study methods to pass the CEH v13 exam

1. Understand the content and structure of the exam.

Before you begin studying, thoroughly research the structure of the CEH v13 exam. Make sure you understand the percentage of topics covered in the exam and focus on sections with high weighting such as Footprinting, Scanning, System Hacking, and Cloud Security.

2. Learning by topic

- Break down the learning process into modules: Each module in CEH v13 focuses on a specific area such as AI Security, Cloud Security, Mobile Security, etc. This helps you acquire knowledge systematically and avoids being overwhelmed.
- For new topics like Quantum Computing or API Security, invest extra time in researching materials outside of your official course to gain a deeper understanding of the field.

3. Practice with real-world labs.

- Lab practice is one of the most effective ways to prepare for the CEH v13 exam. EC-Council's iLabs system offers over 250 practical lab exercises, helping you hone your hacking and security skills across various platforms.
- You can also use platforms like Hack The Box and TryHackMe to practice further with realistic attack scenarios.

4. Use official and supplementary documents.

- Official learning materials from EC-Council: textbooks, lecture slides, and the iLabs system are essential resources to help you gain a solid foundation of knowledge.
- Refer to external resources: Read additional books such as "The Web Application Hacker's Handbook" on Web Security and in-depth articles on Cloud Security and AI Security on reputable websites such as OWASP and NIST.

Effective study strategies for the CEH v13 exam

1. Plan your exam preparation.

- Allocate your study time by module: With 24 modules in CEH v13, dedicate time to each module, from topics you excel at to new or challenging ones.
- Practice tests: Take practice tests on platforms like EC-Council Exam Prep or websites that provide CEH questions to familiarize yourself with the structure and time pressure.

2. Focus on new modules

CEH v13 has been updated with many new topics such as AI Security, Quantum Computing, Cloud, and Container Security. Spend extra time on these modules, as they often feature prominently in the exam.

3. Practice as much as possible.

Repeatedly completing lab exercises on the iLabs system, focusing on topics such as Penetration Testing, Cloud Security, API Security, etc., will help you better understand the attack and defense processes in a real-world environment.

The CEH v13 exam is an opportunity to demonstrate your abilities in the field of network security. To succeed in this exam, you need a clear study strategy, plenty of practice with real-world labs, and to make the most of the official study materials from EC-Council. Focus on new topics such as AI Security, Quantum Computing, and Cloud Security, and don't forget to prepare mentally for the 4-hour exam with 150 questions.
